

# Mixed Recycling

Your mixed recycling sacks go to the best facility in London, the Lea Riverside Materials Recovery facility near Bromley-by-Bow.

This modern facility uses the latest technologies to separate recyclables ready for remanufacture.

## What is accepted in a mixed recycling sack?

90% of your waste can go in Mixed Recycling.

The main materials accepted are: paper, plastic, card, metal tins and cans and glass bottles and jars.

## What happens to mixed recycling?

The facility has the capacity to process 250,000 tonnes of dry commercial material every year, and is the largest undercover recyclables facility in London.

The facility uses various high tech systems to sort your waste material into fifteen different streams.

A wide range of technology is used to separate materials, including infrared systems to identify plastic types and eddy currents to separate metals.

Once separated all material is sent back into manufacturing to become new products.
